

Test Report No. 7191014292-MEC11-EMK
dated 19 Aug 2011

PSB Singapore

Note: This report is issued subject to the Testing and Certification Regulations of the TÜV SÜD Group and the General Terms and Conditions of Business of TÜV SÜD PSB Pte Ltd. In addition, this report is governed by the terms set out within this report.

SUBJECT:

Laboratory measurement of sound absorption of slotted panel system submitted by BA Furnishing Pte Ltd on 17 August 2011.

Choose certainty.
Add value.

TESTED FOR:

BA Furnishing Pte Ltd
10 Admiralty Street,
NorthLink Building #06-30
Singapore 787695

Attn: Mr John Goh

DATE OF TEST:

18 Aug 2011

DESCRIPTION OF SAMPLES:

12 pieces of slotted "Murano/SIU akustik" HDF panel were received for testing.

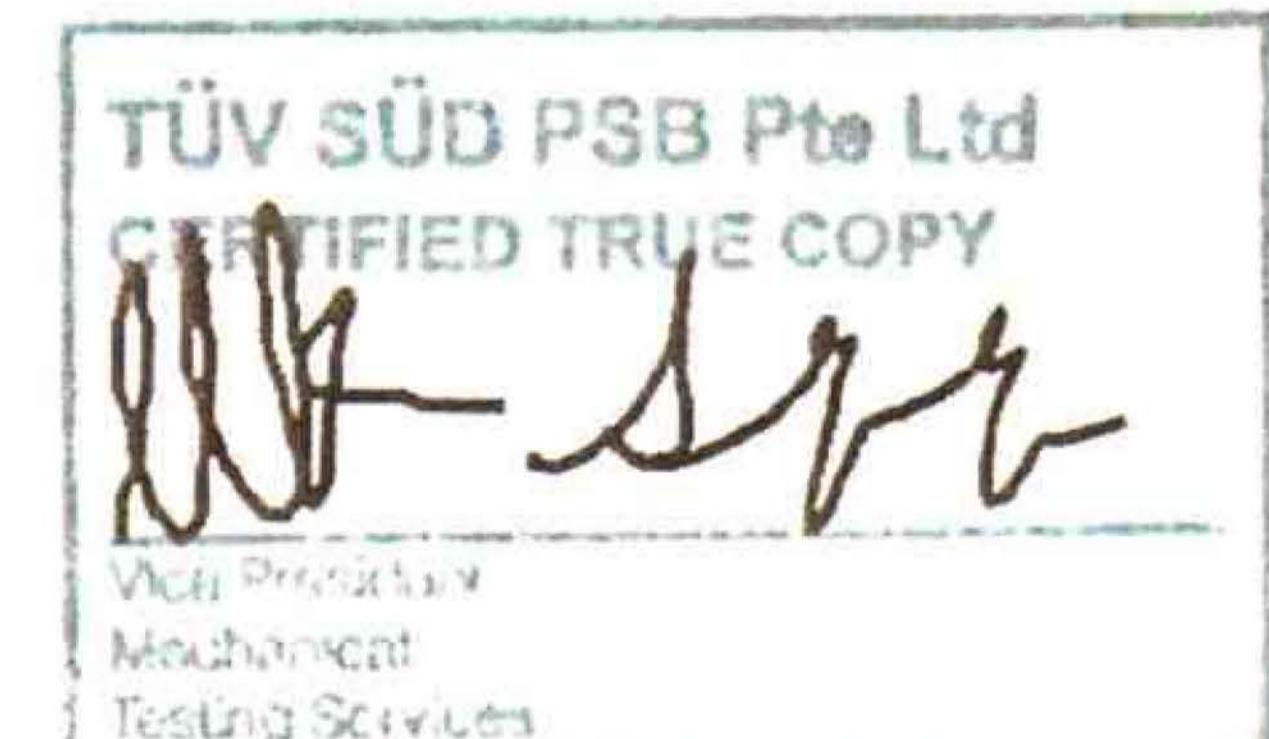

<u>Dimension</u>	<u>Weight</u>	<u>Quantity</u>
800mm (width) x 1200mm (length) x 17.85mm (thick)	14.6kg	7 pieces
800mm (width) x 900mm (length) x 17.85mm (thick)	11.2kg	4 pieces
710mm (width) x 1200mm (length) x 17.85mm (thick)	12.4kg	1 piece

The panel system was framed up using 75mm galvanised steel channel.

The panel system consisted of slotted "Murano/SIU akustik" HDF panels with a layer of black felt glued on its back and a layer of 25mm thick airspace and 50mm thick, 60kg/m³ density rockwool.

The panel system was placed on the chamber floor as Type A mounting configuration in the reverberation room (refer to Figure 3). The gaps between the edges of the steel channel and the floor were sealed with reflective aluminium tapes.

The technical drawing of the panels system was shown in Appendix.

Test Report No. 7191014292-MEC11-EMK
dated 19 Aug 2011

PSB Singapore

METHOD OF TEST:

The test was conducted in accordance with the following test standards :

- a) ISO 354 : 2003 "Measurement of sound absorption in a reverberation room"
- b) ISO 11654 : 1997 "Sound absorbers for use in buildings - Rating of sound absorption"

Test specimen exposed area : 10.49m²

Temperature in reverberation room : 26°C

Relative humidity in reverberation room: 45%

Reverberation room volume : 206m³

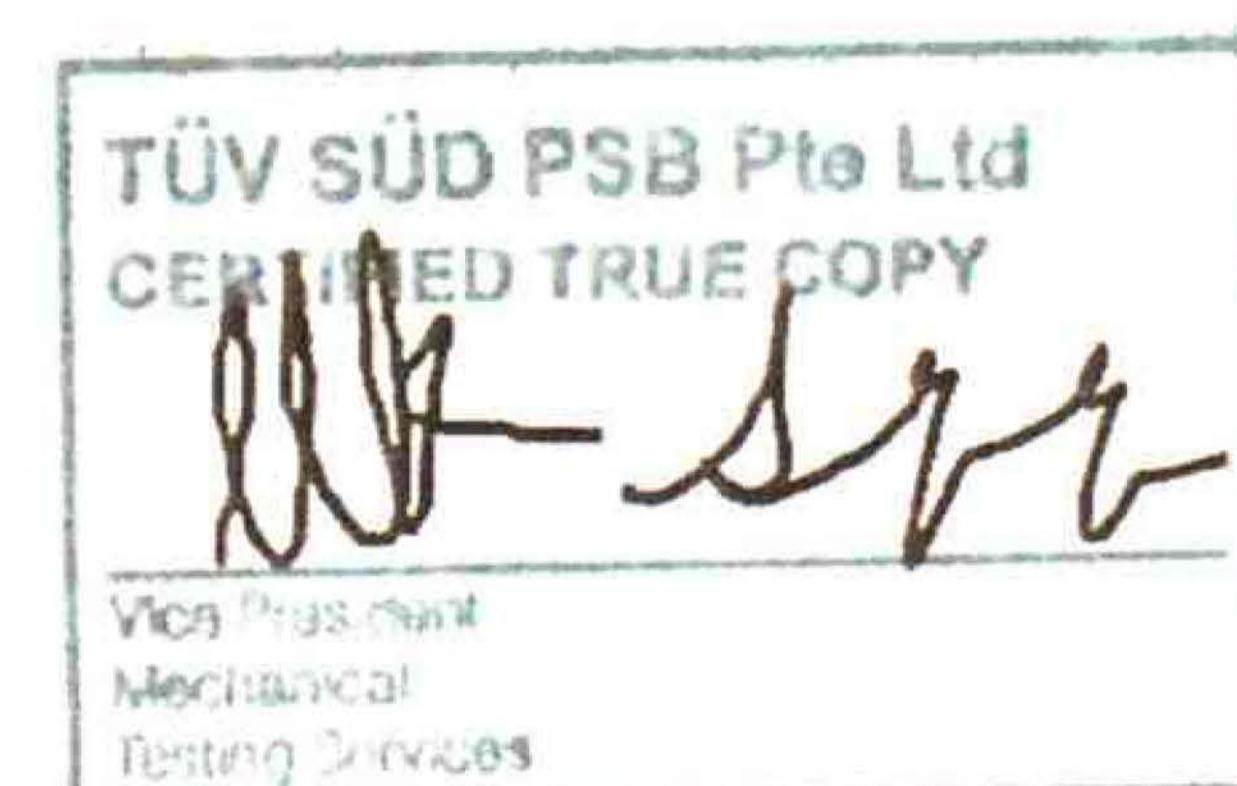

Location of the test : Acoustics Lab of TÜV SÜD PSB Pte Ltd

Figure 2 shows the test set-up in the reverberation room.

TEST EQUIPMENT:

The following instruments were used for the test.

- 1) Multi-channel Data Acquisition Unit (B & K Type 2816) with Pulse System
- 2) 2 unit of loudspeakers (JBL MPro MP415)
- 3) 1 set of ½" diffuse-field microphone (B & K Type 4943) and pre-amplifier (B & K Type 2669)
- 4) A power amplifier for speaker (Crown Model CE 1000)
- 5) A Sound Pressure Level Calibrator (Norsonic Type 1251)

PSB Singapore

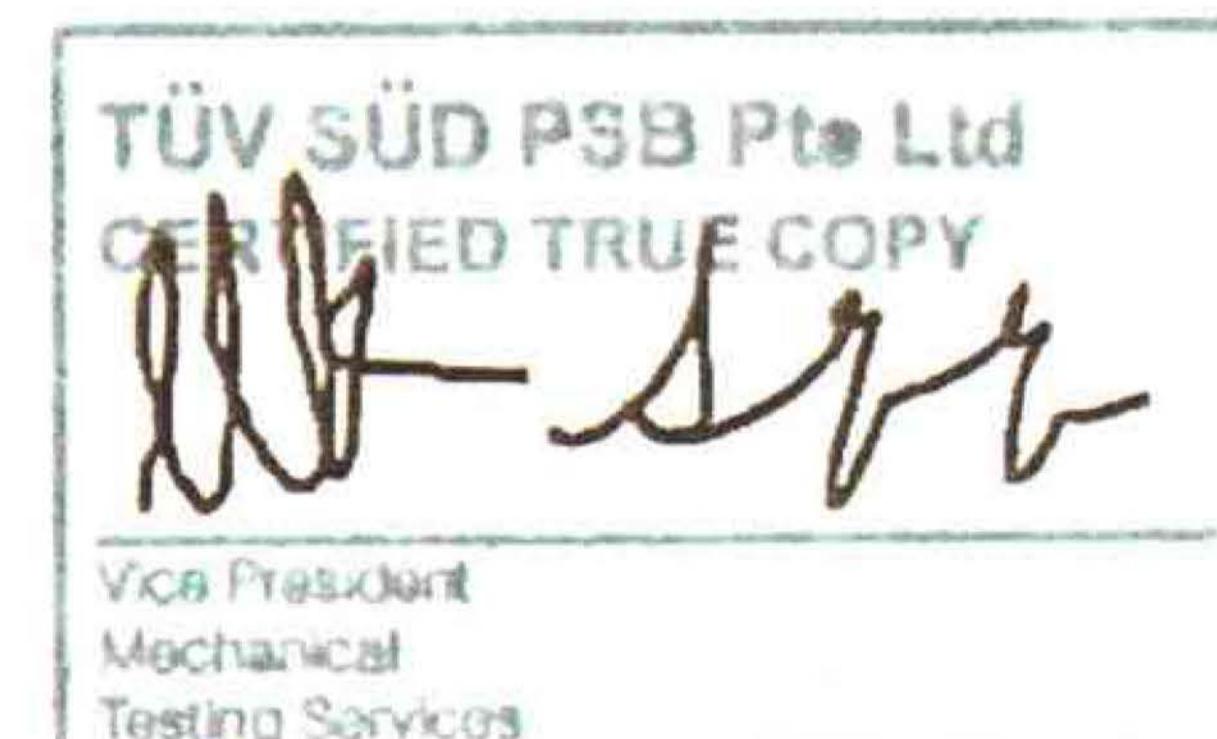

TEST PROCEDURES:

- 1) Instrumentation was set up according to ISO 354.
- 2) Measurement system was calibrated using a sound level calibrator.
- 3) 2 loudspeakers were placed at 2 different corners of the reverberation room.
- 4) Microphone was placed at 1m away from the test specimen, reverberation room and diffusers and 2m away from loudspeaker.
- 5) Measurement was conducted in 18 decays for each centre frequency of 1/3 octave band from 100Hz to 5000Hz.
- 6) Measurement was repeated for another 15 different microphone positions.
- 7) Mean reverberation time was calculated based on 16 measured reverberation time for each individual frequency of 1/3 octave band from 100Hz to 5000Hz.
- 8) Steps 3 to 7 were repeated after the test sample was installed in the reverberation room to obtain mean reverberation time for each frequency band.
- 9) Sound absorption area of the test specimen was calculated using formula

$$A = (55.3V/c) \times (1/T_2 - 1/T_1)$$

where V is the volume of the empty reverberation room, (m^3)
 c is the velocity of sound in air,
 T_1 is the mean reverberation time of empty reverberation room, (s)
 T_2 is the mean reverberation time of reverberation room with test specimen installed, (s)

- 10) Sound absorption coefficient α_i was calculated using formula, $\alpha_i = A/S$ where S is the exposed surface area of the test specimen, (m^2).
- 11) Practical sound absorption coefficient α_{Pi} for each octave band from the arithmetic mean value of the three one-third-octave sound absorption coefficient within the octave bands.
- 12) Weighted sound absorption coefficient α_w was determined at the frequency of 500Hz of the shifted reference curve.

PSB Singapore

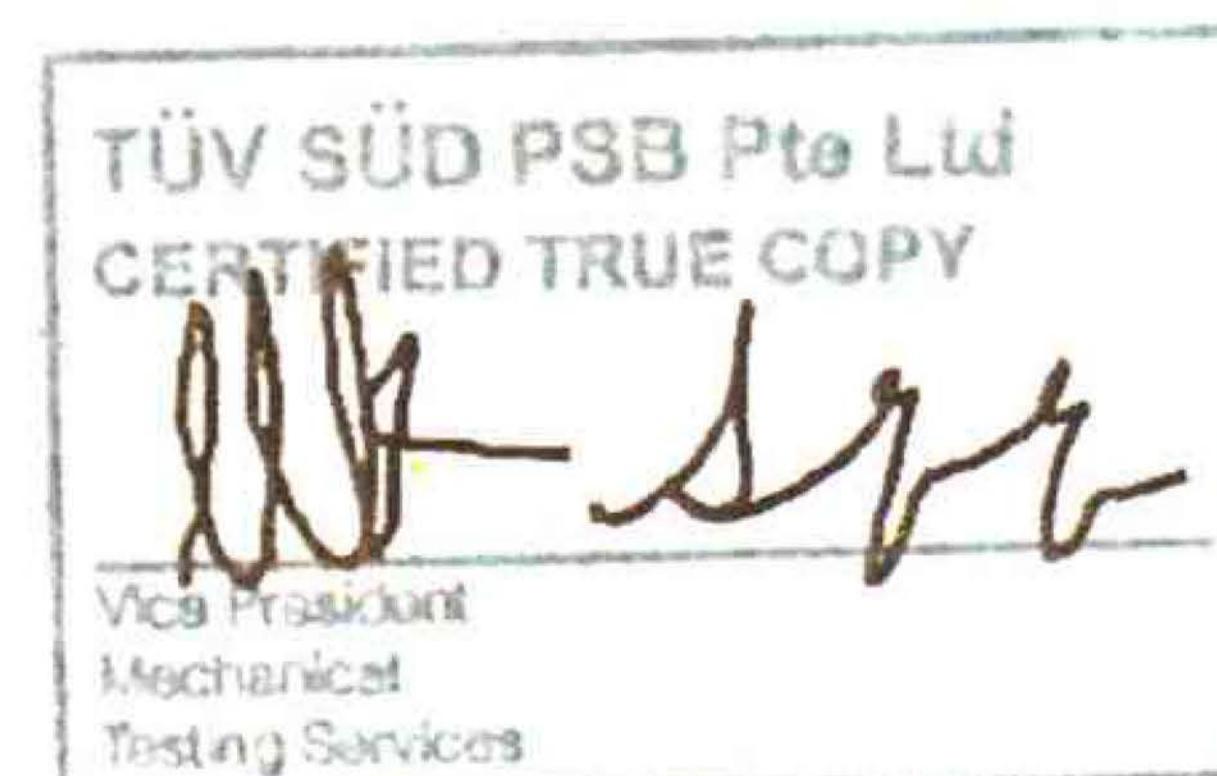

RESULTS:

- 1) Values of sound absorption coefficient α_i and practical sound absorption coefficient α_{Pi} of the tested sample were tabulated in Table 1.
- 2) Weighted sound absorption coefficient α_w rating was tabulated in Table 2.

Table 1 : Sound Absorption Coefficient and Practical Sound Absorption Coefficient of slotted "Murano/SIU akustik" HDF panel system

1/3 Octave Frequency (Hz)	"Murano/SIU akustik" HDF panel system (Type A mounting)		
	Sound Absorption Coefficient, α_i	Practical sound absorption coefficient, α_{Pi}	Uncertainty
100	0.59		± 0.13
125	0.70	(0.62)	± 0.11
160	0.56		± 0.08
200	0.75		± 0.08
250	0.58	(0.60)	± 0.05
315	0.49		± 0.02
400	0.36		± 0.02
500	0.29	(0.29)	± 0.01
630	0.22		± 0.01
800	0.14		± 0.01
1000	0.13	(0.12)	± 0.00
1250	0.10		± 0.00
1600	0.09		± 0.00
2000	0.08	(0.09)	± 0.00
2500	0.09		± 0.00
3150	0.07		± 0.00
4000	0.09	(0.09)	± 0.00
5000	0.12		± 0.00

Remark : Values in bracket () denotes the values of Practical Sound Absorption Coefficient, α_{Pi} at 1/1 Octave Frequency Bands.

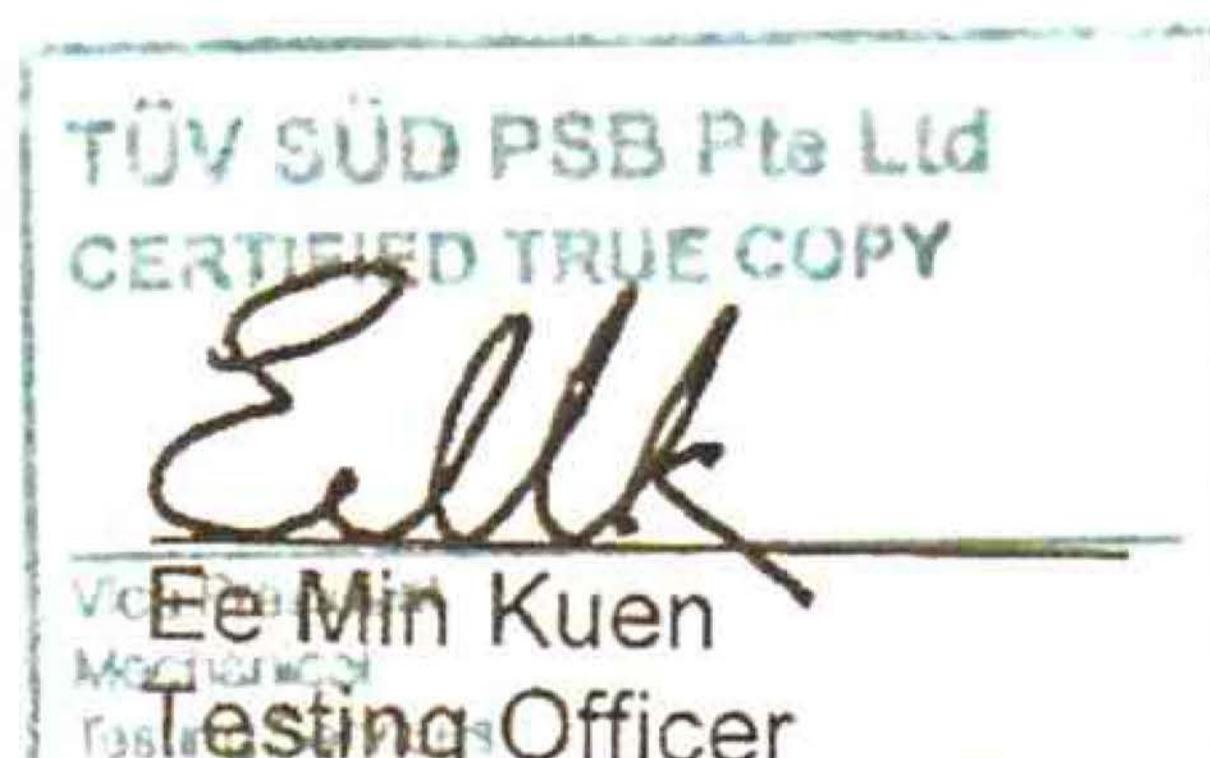

PSB Singapore

RESULTS: (cont'd)

Table 2 : Weighted sound absorption coefficient α_w rating of slotted "Murano/SIU akustik" HDF panel system

Frequency (Hz)	Shifted reference Curve	Practical Absorption Coefficient, α_{pi}	Deficiency	
125	-	0.60	-	-
250	-0.05	0.60	-0.65	0.00
500	0.15	0.30	-0.15	0.00
1000	0.15	0.10	0.05	0.05
2000	0.15	0.10	0.05	0.05
4000	0.05	0.10	-0.05	0.00
Total Deficiency (250Hz - 4000Hz)				0.10
Weighted Sound Absorption Coefficient, α_w				0.15 (L)

Remark : Values in bracket (L) denotes the values of Practical Sound Absorption Coefficient, α_{pi} at 250Hz exceed the value of the shifted reference curve by 0.25 or more.

dated 19 Aug 2011

PSB Singapore

Please note that this Report is issued under the following terms :

1. This report applies to the sample of the specific product/equipment given at the time of its testing/calibration. The results are not used to indicate or imply that they are applicable to other similar items. In addition, such results must not be used to indicate or imply that TÜV SÜD PSB approves, recommends or endorses the manufacturer, supplier or user of such product/equipment, or that TÜV SÜD PSB in any way "guarantees" the later performance of the product/equipment. Unless otherwise stated in this report, no tests were conducted to determine long term effects of using the specific product/equipment.
2. The sample/s mentioned in this report is/are submitted/supplied/manufactured by the Client. TÜV SÜD PSB therefore assumes no responsibility for the accuracy of information on the brand name, model number, origin of manufacture, consignment or any information supplied.
3. Nothing in this report shall be interpreted to mean that TÜV SÜD PSB has verified or ascertained any endorsement or marks from any other testing authority or bodies that may be found on that sample.
4. This report shall not be reproduced wholly or in parts and no reference shall be made by the Client to TÜV SÜD PSB or to the report or results furnished by TÜV SÜD PSB in any advertisements or sales promotion.
5. Unless otherwise stated, the tests were carried out in TÜV SÜD PSB Pte Ltd, No.1 Science Park Drive Singapore 118221.
